# Int 21H, AH=43H, AL=00H

## Version

2 and higher

## Brief

GET FILE ATTRIBUTES

## Family API

[DosQFileMode](#)

## Input

- AX = 4300h
- DS:DX → ASCIZ filename

## Return

- CF clear if successful
  - CX = file attributes (see #01420)
  - AX = CX (DR DOS 5.0)
- CF set on error
  - AX = error code (01h,02h,03h,05h) (see #01680 at AH=59h)

## Macro

## Notes

Bitfields for file attributes:

Bit(s)	Description
7	unused
6	unused
5	archive
4	directory
3	volume label
2	system
1	hidden
0	read-only

under DR DOS 3.41 and 5.0, attempts to change the subdirectory bit are simply ignored without an error

BUG: Windows for Workgroups returns error code 05h (access denied) instead of error code 02h (file not found) when attempting to get the attributes of a nonexistent file. This causes open() with O\_CREAT and fopen() with the "w" mode to fail in Borland C++.
