

This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

**Note:** This is legacy API call. It is recommended to use 32-bit equivalent

## DosSubFree

This call frees memory previously allocated by DosSubAlloc.

### Syntax

```
DosSubFree (SegSelector, BlockOffset, Size)
```

### Parameters

- SegSelector ([SEL](#)) - input : Data segment selector.
- BlockOffset ([USHORT](#)) - input : Memory block offset. The value specified must equal the BlockOffset returned on a previous DosSubAlloc call.
- Size ([USHORT](#)) - input : Size, in bytes, of the block to be freed.

### Return Code

rc ([USHORT](#)) - return

Return code descriptions are:

- 0 NO\_ERROR
- 312 ERROR\_DOSSUB\_OVERLAP
- 313 ERROR\_DOSSUB\_BADSIZE

### Remarks

DosSubFree specifies the offset of a block of memory previously suballocated by a [DosSubAlloc](#) request. If the block specified overlaps memory in the segment that is not suballocated, an error is returned. Like DosSubAlloc, the size parameter must be a multiple of four bytes; otherwise, it is rounded up to a multiple of four bytes.

The allocated segment is freed by calling [DosFreeSeg](#).

## Example Code

### C Binding

```
#define INCL_DOSMEMMGR

USHORT rc = DosSubFree(SegSelector, BlockOffset, Size);

SEL      SegSelector;    /* Segment selector */
USHORT   BlockOffset;    /* Offset of memory block to free */
USHORT   Size;           /* Size of block in bytes */

USHORT   rc;             /* return code */
```

### MASM Binding

```
EXTRN DosSubFree:FAR
INCL_DOSMEMMGR EQU 1

PUSH WORD SegSelector ;Segment selector
PUSH WORD BlockOffset ;Offset of memory block to free
PUSH WORD Size ;Size of block in bytes
CALL DosSubFree
```

Returns WORD
